Nice. See comment below and on p. 5.

**Sort[Join[Range[3], Range[3]]]**

{1, 1, 2, 2, 3, 3}

**9 + Range[11]** <== You are one of the few that realized what Wolfram wanted here.

Out[\*]=

{10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20}

**List[Sort[Join[(Range[5]^2), (Range[5]^3)]]]**

**NumberLinePlot[Range[20]^2]**

**BarChart[Range[10]^2]**

**ListLinePlot[Table[Length[IntegerDigits[n^2]], {n, 0, 100}]]**

Out[ ]=

```
Blend[{RGBColor[1, 0, 1], RGBColor[1, 1, 0]}]
```

Out[ ]=

Mathematica knows a lot of standard colors, so he meant you to do

```
Blend[{Pink, Yellow}]
```

```
Table[Blend[{Yellow, Hue[x]}], {x, 0, 1, 0.05}]
```

Out[ ]=

```
{, , , , , , , , , , , , , , , , , , , , , , , , , , , }
```

```
Table[Style[x, Hue[x]], {x, 0, 1, 0.1}]
```

Out[ ]=

```
{0., 0.1, 0.2, 0.3, 0.4, 0.5, 0.6, 0.7, 0.8, 0.9, 1.}
```

```
Style[Purple, 100]
```

Out[ ]=

```
Table[Style[Red, x], {x, 10, 100, 10}]
```

Out[ ]=

```
Style[999, Red, 100]
```

Out[ ]=

999

A slick way to do the next one is: `Table[Style[i, i], {i, Range[10]^2}]`

```
Table[Style[x^2, x^2], {x, 1, 10, 1}]
```

Out[ ]=

```
{, , 9, 16, 25, 36, 49, 64, 81, 100}
```

**Syntax:** Incomplete expression; more input is needed .

Another leftover error message, I guess.

```
Part[{Red, Yellow, Green}, RandomInteger[{1, 3}, 100]]
```

Out[8]=

```
