Tahm — Waves Exam 3

April 29, 2025

TOTAL SCORE / 25

Comments and Scores for Each Problem Are on Last Page

This exam tests your fluency with the core of the Wolfram Language, as it was presented in *An Elementary Introduction to the Wolfram Language, 3rd Edition (EIWL3)*, Sections 25-34 and 38-41. There is one problem with two or three parts corresponding to each section. *Tip: all of them are meant to be quick. If you get bogged down, move on.*

Directions:

After downloading this notebook, rename it with your first name in the filename. E.g., Eli-Exam3.nb, Harper-Exam3.nb, Hexi-Exam3.nb, Jeremy-Exam3.nb, Rania-Exam3.nb, Tahm-Exam3.nb, or Walker-Exam3.nb.

Then disconnect from the wifi and work the exam. Save your notebook early and often so that you don't lose work in progress.

Your answers always go into the Wolfram Language Input cells that begin with a comment, e.g.,

```
(* 1a *) foobar /@ Plus[Array]
```

All your answers should execute and re-execute without warnings or error messages.

You may refer to your downloaded copies of EIWL3, and anything else we developed in the course (like your cheat sheets!), but not to any web resources.

When you are done, save your notebook one last time, re-join the wifi, and then email it to me.

This exam was designed to require about 45 minutes, but if you need a full hour, that is ok. Everyone will stop at the one-hour mark.

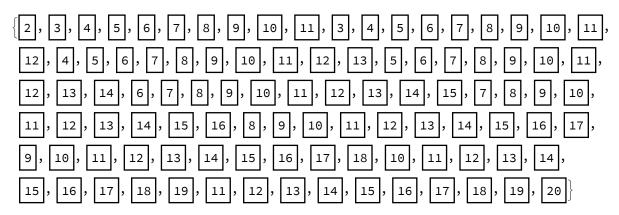

1. Applying Functions (EIWL3 Section 25)

(a)

Use Map with a *levelspec* to put a frame around each individual number in the array Array [Plus, {10,10}] (we don't want frames around already-framed things — just one level of frames around the individual numbers).

Framed /@ Flatten[Array[Plus,{10,10}]]

Out[58]=

(b)

Copy what you did in (a), but for this part, also turn the result into a grid using **Grid** and the "as an afterthought" syntax:

```
In[59]:= (* 1b *)
{Framed /@ Flatten[Array[Plus,{10,10}]]} // Grid
```

Out[59]=

2 3 4 5 6 7 8 9 10 11 3 4 5 6 7 8 9 10 11 12 4 5 6 7 8 9

In[60]:=

In[61]:=

2. Pure Anonymous Functions (EIWL3 Section 26)

(a)

Use the # and & notation to create an anonymous function that cubes whatever is given it, and then use @ to apply it to every member of the list $\{1,2,3,4,5\}$.

```
In[62]:= (* 2a *)

In[63]:= #^2 & /@ {1, 2, 3, 4, 5}

Out[63]=

{1, 4, 9, 16, 25}
```

(b)

Use the #1, #2, and & notation to create an anonymous function that divides its first argument by its second argument. Combine this with Apply and a *levelspec* to apply the function to

$$\left\{ \left\{ 1,2 \right\}, \left\{ 2,3 \right\}, \left\{ 3,4 \right\}, \left\{ 4,5 \right\} \right\}. \text{ Once you have this right, you will get } \left\{ \frac{1}{2}, \frac{2}{3}, \frac{3}{4}, \frac{4}{5} \right\}.$$

$$\ln[64] = \left(* 2b * \right)$$

$$\ln[65] = \left(#1/#2 \right) \& @@@ \left\{ \left\{ 1,2 \right\}, \left\{ 2,3 \right\}, \left\{ 3,4 \right\}, \left\{ 4,5 \right\} \right\}$$

$$\left\{ \frac{1}{2}, \frac{2}{3}, \frac{3}{4}, \frac{4}{5} \right\}$$

$$\left\{ \frac{1}{2}, \frac{2}{3}, \frac{3}{4}, \frac{4}{5} \right\}$$

3. Applying Functions Repeatedly (EIWL3 Section 27)

(a)

Use **Nest** to apply **Factorial** twice to {1,2,3,4}. If you have this right, 620,448,401,733,239,439,360,000 will be one of the elements of your answer.

```
In[66]:= (* 3a *)
       Nest[Factorial, {1, 2, 3, 4}, 2]
Out[66]=
       {1, 2, 720, 620 448 401 733 239 439 360 000}
```

(b)

Use **NestList** to apply **Factorial** three times to {1,2,3}, as well as showing the results of doing it 0, 1, and 2 times. If you have this right, you will have an insanely large result at the third step. Do not go any higher, or I do not know what will happen to your computer.

```
In[67]:= (* 3b *)
                   NestList[Factorial, {1, 2, 3}, 3]
Out[67]=
                   \{\{1, 2, 3\}, \{1, 2, 6\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2, 720\}, \{1, 2,
                          631\,156\,947\,382\,240\,678\,577\,958\,130\,457\,082\,619\,920\,575\,892\,247\,259\,536\,641\,565\,162\,052\,015\,\%

                             297 380 797 578 013 056 049 576 342 838 683 057 190 662 205 291 174 822 510 536 697 756 603
                             029\,574\,043\,387\,983\,471\,518\,552\,602\,805\,333\,866\,357\,139\,101\,046\,336\,419\,769\,097\,397\,432\,285\,
                             994 219 837 046 979 109 956 303 389 604 675 889 865 795 711 176 566 670 039 156 748 153 115
                             943\,980\,043\,625\,399\,399\,731\,203\,066\,490\,601\,325\,311\,304\,719\,028\,898\,491\,856\,203\,766\,669\,164\,\%
                             000 000 000 000 000 000 000 } }
```

4. Tests and Conditionals (EIWL3 Section 28)

(a)

Use **PrimeQ** and /@ to generate a **True** or **False** list that is twenty elements long expressing which numbers in **Range** [20] are prime.

(b)

Combine PrimeQ with Select to only list the numbers in Range [20] that are prime.

```
In[69]:= (* 4b *)
       Select[Range[20], PrimeQ]
Out[69]=
       {2, 3, 5, 7, 11, 13, 17, 19}
```

5. More About Pure Functions (*EIWL3* Section 29)

(a)

Accomplish exactly the same thing as **Table** $[n*(n-1)/2, \{n,6\}]$ using **Array** and a pure function.

```
In[70]:= (* 5a *)
       Array[#*(#-1)/2\&, 6]
Out[70]=
       \{0, 1, 3, 6, 10, 15\}
```

(b)

Make some modifications to FoldList[Plus, {1,2,3,4,5}] so that it produces a list of the first 10 factorials. Instead of hand-coding the list up to 10, begin by first changing {1,2,3,4,5} to Range [10]

```
In[71]:= (* 5b *)
        FoldList[Factorial[Range[10]],10]
       ••• FoldList: Nonatomic expression expected at position 2 in
            FoldList[{1, 2, 6, 24, 120, 720, 5040, 40320, 362880, 3628800}, 10]. (1)
Out[71]=
       FoldList[{1, 2, 6, 24, 120, 720, 5040, 40320, 362880, 3628800}, 10]
```

6. Rearranging Lists (*EIWL3* Section 30)

(a)

```
Use Transpose and one of the levelspec options to turn
{{{1,uno},{2,dos},{3,tres}}},{{4,cuatro},{5,cinco},{6,seis}}} into
{{{1,2,3},{uno,dos,tres}},{{4,5,6},{cuatro,cinco,seis}}}
```

```
In[77]:= (* 7b *)

Take[{{Eli,Harper,Hexi},{Jeremy,Rania,Tahm,Walker}}, 2]

Out[77]=

{{Eli, Harper, Hexi}, {Jeremy, Rania, Tahm, Walker}}

In[78]:=
```

8. Patterns (EIWL3 Section 32)

(a)

Use Cases to choose the lists that begin and end with the same letter in this list of lists (but look ahead to part (b) before you solve part (a)):

```
{
       {"a", "l", "u", "l", "a"},
       {"a", "l", "o", "h", "a"},
       {"a", "r", "a", "r", "a"},
       {"b", "o", "n", "u", "s"},
       {"c", "i", "v", "i", "c"},
       {"d", "e", "b", "e", "d"},
       {"e", "l", "b", "o", "w"},
       {"z", "a"},
       {"z", "z"}
      }
In[79]:= (* 8a *)
     Cases[{
       {"a", "l", "u", "l", "a"},
       {"a", "l", "o", "h", "a"},
       {"a", "r", "a", "r", "a"},
       {"b", "o", "n", "u", "s"},
       {"c", "i", "v", "i", "c"},
       {"d", "e", "b", "e", "d"},
       {"e", "l", "b", "o", "w"},
       {"z", "a"},
       {"z", "z"}
     }, {x_,__,x_}]
Out[79]=
      {{a, l, u, l, a}, {a, l, o, h, a}, {a, r, a, r, a}, {c, i, v, i, c}, {d, e, b, e, d}}
In[80]:=
```

(b)

The pattern **BlankNullSequence** has the shorthand ___. Use ___ to improve the pattern you used in Part (a) so that the two-letter list $\{z, z\}$ is also included in your result.

```
ln[81]:= (* 8b *)
```

```
In[82]:= Cases[{
       {"a", "l", "u", "l", "a"},
       {"a", "l", "o", "h", "a"},
       {"a", "r", "a", "r", "a"},
       {"b", "o", "n", "u", "s"},
       {"c", "i", "v", "i", "c"},
       {"d", "e", "b", "e", "d"},
       {"e", "l", "b", "o", "w"},
       {"z", "a"},
       {"z", "z"}
      }, {x_,__,x_}]
Out[82]=
      \{\{a, l, u, l, a\}, \{a, l, o, h, a\}, \{a, r, a, r, a\}, \{c, i, v, i, c\}, \{d, e, b, e, d\}, \{z, z\}\}
```

9. Assigning Names to Things (EIWL3 Section 38)

(a)

Use Module to compute x=Factorial[10], and then produce $\{x,x^2,x^3\}$.

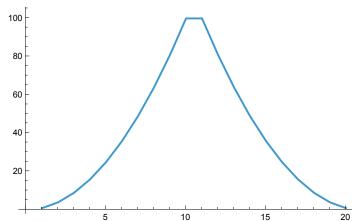

```
In[83]:= (* 9a *)
In[84]:=
      Module[{x = Factorial[10]}, {x, x^2, x^3}]
Out[84]=
      {3628800, 13168189440000, 47784725839872000000}
```

(b)

Inside Module, let rangeSquared=Range [10] ^2, and then produce a list line plot of rangeSquared joined with Reverse [rangeSquared].

```
ln[85]:= (* 9b *)
```

In[86]:= Module[{rangeSquared = Range[10]^2}, ListLinePlot[Join[rangeSquared, Reverse[rangeSquared]]]] Out[86]=

10. Immediate and Delayed Values (EIWL3 Section 39)

(a)

Make a one-character change to this expression,

Module $[x := RandomInteger[10]], \{x, x^2, x^3, x^4\}]$, so that it produces four different powers of the same random number instead of four different powers of different random numbers.

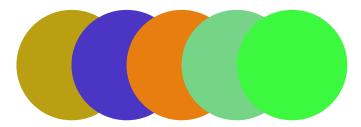

```
In[87]:= (* 10a *)
 In[88]:= Module [x=RandomInteger[10]], \{x, x^2, x^3, x^4\}]
Out[88]=
        {5, 25, 125, 625}
 In[89]:=
```

(b)

Make a one-character change to this expression,

Module[{color=RandomColor[]},Graphics[Table[Style[Disk[{i,0}],color],{i **,5**}]]], so that it produces five different-color disks.

In[90]:= (* 10b *)Module[{color:=RandomColor[]},Graphics[Table[Style[Disk[{i,0}],color],{i,5}]]] Out[90]=

11. Defining Your Own Functions (EIWL3 Section 40)

(a)

Define a function **f** that takes a list of three elements and out of them makes a list of lists that contains all six possible orderings. Using **Permutations** will make this easy.

```
Include a test of your function as f[1,2,3] and make sure it gets
      \{\{1,2,3\},\{1,3,2\},\{2,1,3\},\{2,3,1\},\{3,1,2\},\{3,2,1\}\}.
In[91]:= (* 11a *)
In[92]:=
In[93]:= f[1,2,3]
      Out[93]=
      \{\{1, 2, 3\}, \{1, 3, 2\}, \{2, 1, 3\}, \{2, 3, 1\}, \{3, 1, 2\}, \{3, 2, 1\}\}
```

(b)

Define a function g that gives 1 for g[0], and gives n*g[n-1] for any integer n greater than 0, but don't use an If statement! Include a test of your function as g[6] and make sure it gets 720.

```
In[95]:= (* 11b *)
        g[6]
        g[0] = 1; g[n_{-}] := n * g[n - 1]
Out[95]=
        720
```

12. More About Patterns (*EIWL3* Section 41)

(a)

Use the replacement rule notation — e.g., $/ \cdot$ and -> — to exchange the first and last element in any list

```
containing two or more elements and test your replacement using the list
      {alpha, beta, gamma, delta, epsilon}.
 In[97]:= (* 12a *)
 In[98]:= {alpha, beta, gamma, delta, epsilon} /.
       \{x_{--}, a_{-}, b_{-}, c_{-}, d_{-}, y_{--}\} \rightarrow \{y, a, b, c, d, x\}
      (*I couldn't get it for any length but here it is for a string length of 5*)
Out[98]=
      {epsilon, alpha, beta, gamma, delta}
 In[99]:=
      (b)
      Starting with Characters/@RomanNumeral [Range [100], select all the sequences correspond-
      ing to the Roman numerals that have XXX in them.
In[100]:=
      (* 12b *)
      Cases [Characters/@RomanNumeral[Range[100]], \{\_\_, "X", "X", "X", \_\_\}] \\
Out[100]=
      {{X, X, X}, {X, X, X, I}, {X, X, X, I, I}, {X, X, X, I, I, I}, {X, X, X, I, V},
       {X, X, X, V}, {X, X, X, V, I}, {X, X, X, V, I, I}, {X, X, X, V, I, I, I},
       {X, X, X, I, X}, {L, X, X, X}, {L, X, X, X, I}, {L, X, X, X, I, I},
       {L, X, X, X, I, I, I}, {L, X, X, X, I, V}, {L, X, X, X, V}, {L, X, X, X, V, I},
        {L, X, X, X, V, I, I}, {L, X, X, X, V, I, I, I}, {L, X, X, I, X}}
      (c)
      Use StringJoin to turn what you got in 12(b) into
      ,LXXXII,LXXXIII,LXXXIV,LXXXV,LXXXVI,LXXXVII,LXXXVIII,LXXXXIX}.
In[101]:=
      (* 12c *)
In[102]:=
      StringJoin /@ Cases[Characters/@RomanNumeral[Range[100]],{___,"X","X","X",___}]
Out[102]=
      {XXX, XXXI, XXXII, XXXIII, XXXIV, XXXV, XXXVI, XXXVII, XXXVIII, XXXIX, LXXX,
       LXXXI, LXXXII, LXXXIII, LXXXIV, LXXXV, LXXXVI, LXXXVII, LXXXVIII, LXXXIX}
```

1. Applying Functions <u>1</u> /2
Directions were to use Map with a levelspec. 1(b) didn't work because you used Flatten in 1(a).
2. Pure Anonymous Functions <u>2</u> /2 2(a) perfect. For 2(b) directions were again to use a levelspec, but I'm impressed with your use of @@@ to elegantly get the job done. 3. Applying Functions Repeatedly <u>2</u> /2
Perfect.
4. Tests and Conditionals 2 / 2
Nice. Although in 4(a) there is a slicker form of PrimeQ that avoids PrimeQ[#]&.
 5. More About Pure Functions1_/2 5(a) perfect. 5(b), you didn't really see how FoldList was meant to work. You probably figured that, given that your solution produces an error message. 6. Rearranging Lists _2_/2 Nice. Although I would have liked to see you use a levelspec in 6(a). See my solution for an extra cute levelspec option. 7. Parts of Lists _0.5/2
Egadz. These didn't work, although 7(a) is partly right.
8. Patterns <u>2</u> / 2
Perfect use of patterns.
9. Assigning Names to Things <u>2</u> /2
Perfect use of modules.
10. Immediate and Delayed Values <u>2</u> / 2
Perfect use of immediate vs. delayed assignments.
11. Defining Your Own Functions/ 2
Perfect!
12. More About Patterns/3
